EDUCATION

University of Georgia

Athens, GA

Bachelor of Science in Computer Science | Certification in Artificial Intelligence

Expected Graduation: May 2027

Coursework: Data Structures, Algorithms, Computing Architecture, Systems Programming, Object Oriented Programming, Software Development II, Database Management, Web Programming, Artificial Intelligence, Discrete Mathematics, Linear Algebra, Computing Ethics, Data Science I, Calculus II.

PROFESSIONAL EXPERIENCE

Trinity Health | *Information Systems Intern*

May 2025 - August 2025

- Utilized Darik's Boot and Nuke and disk cloning software to securely wipe, reimagine, and deploy 150+ computers and devices, ensuring standardized configurations and efficient rollouts across departments.
- Audited IT assets and troubleshooted hardware/software issues at user endpoints, improving inventory accuracy and reducing downtime for 200+ staff members, ultimately streamlining IT support operations and enhancing overall service reliability.
- Supported configuration and maintenance of 30+ network devices (access points, switches), strengthening building-wide connectivity and reducing network-related service tickets by 25%, while contributing to stable and scalable network infrastructure.

UGA Agricultural Robotics Lab | *Undergraduate Researcher*

August 2025 - Present

- Developed and evaluated autonomous navigation functionality for a poultry-farm rover, focusing on sensor-driven movement logic and on-device computation to support controlled indoor testing environments.
- Implemented and tested autonomous navigation algorithms on Raspberry Pi using Python, integrating motor-control scripts with ultrasonic sensor feedback to detect obstacles, tune turning behavior, and reduce navigation errors by ~30% across 20+ indoor trial runs.

FWE | *Front-End Engineering Intern*

January 2025 - May 2025

- Developed and customized responsive web interfaces using React and Node.js, applying user-centered design principles, WCAG accessibility standards, improving cross-platform usability and performance.
- Conducted layout audits and implemented UX heuristics that reduced user drop-off rates by 20% on key pages; optimized site architecture and navigation through iterative design cycles, A/B testing, and performance analytics review.

SolutionZ Inc. | *Information Technology Intern*

August 2022 - February 2023

- Collaborated with 4 interns to allocate \$50,000+ in grants to 20+ Georgia schools, expanding technology access; optimized network security and AV systems in 15+ conference rooms to boost data protection and collaboration.
- Gained hands-on experience in network troubleshooting, software deployment, and AV technology integration within corporate environments, improving operational efficiency and supporting seamless day-to-day business functions.

PERSONAL PROJECTS

SeatScout

January 2026 - Present

- Built a full-stack ticket aggregation platform using Next.js and React, integrating 4 major ticketing APIs (Ticketmaster, StubHub, SeatGeek, Vivid Seats) to deliver real-time price comparison across NBA, NFL, MLB, and NHL inventories, saving users an average of \$47 per ticket
- Engineered end-to-end architecture spanning frontend UI, backend API layer, and Clerk authentication, enabling real-time side-by-side pricing that has compared 250,000+ tickets across 100+ users since launch
- Implemented dynamic section-level pricing logic that surfaces the cheapest available listing per section, aggregating live inventory across all major platforms into a single unified interface.

StockScope

August 2025 - Present

- Built a full-stack, cross-platform stock research application using React Native (Expo) and Node.js/Express, delivering real-time market data, personalized watchlists, and secure authentication across iOS, Android, and Web, supporting 1,000+ stock symbols.
- Designed and implemented 10+ REST API endpoints integrating Finnhub and NewsAPI, leveraging Node-Cache caching to cut external API requests by ~40%, reduce latency, and reliably operate within free-tier rate limits.
- Developed a modular frontend architecture with React Navigation and Firebase (Auth + Firestore), enabling persistent user profiles and watchlists for 100+ saved assets per user, while maintaining clean separation of concerns for scalability.

LectureAI

Jan 2025 - December 2025

- Built LectureAI, a Next.js 14 + TypeScript app converting lecture recordings and YouTube videos into AI study notes, summaries, and key term definitions. Achieved 95%+ transcription accuracy and cut manual note-taking effort by 60%+.
- Engineered a Supabase-powered dashboard with AI-generated quizzes and progress tracking, delivering a mobile-first, responsive UI (Tailwind CSS + React). Processes 60-minute lectures in under 10 minutes and supports 100+ students across devices.
- Deployed on Vercel with auto-updates from GitHub; scaled to handle 500+ lecture uploads with <5% error rate, boosting accessibility and engagement for students using diverse file formats (MP3, WAV, MP4, YouTube).

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, HTML/CSS, C, JavaScript, TypeScript, SQL
- **Frameworks/Libraries:** [Node.js](#), React, [Next.js](#), Tailwind CSS, REST APIs, Gson
- **Dev Tools:** Git, Github, Postman, MongoDB, Maven, VS Code, Linux, Windows, macOS, Vercel
- **Certifications:** Responsive Web Design with HTML, CCSMM Cybersecurity Program Development (March 2025)
Google Foundations of Cybersecurity (June 2025).
